

# SURFASOLVE™

SOLVENT REPLACEMENT TECHNOLOGY

## SURFASOLVE™ TOOL CLEANER

Surfasolve Tool Cleaner is a specially formulated non-hazardous, non-flammable, non-water based solvent replacement system made from organic sources that is worker safe, and easy to use. Surfasolve Tool cleaner is used with our non-mechanical, non-heated workstation to quickly clean rollers and tools during lamination or as a gun flush for resin equipment. Cleaning is simple and efficient, there is no need to dry or blow off tools after using Surfasolve Tool cleaner.

Surfasolve Tool Cleaner has been fully evaluated on its effect in resin curing with little to no degradation in quantities as high

as 10% of the resin. Residue from rollers will not cause resin to stop curing like most solvent replacements. Surfasolve Tool Cleaner will continue to work even with a high level of resin load. Resin will then finishing curing in the workstation and eventually fall through the grid plate to the bottom as a polymerized sedimentation floc. After the resin sediment has cured it can later be disposed of as a solid waste. This process creates no hazardous waste and will greatly reduce costs associated with solvents such as acetone.

## FEATURES & BENEFITS

- **11X** more powerful than Acetone
- Excellent solvency on all resin systems
- Non-flammable | No HAP'S,
- Ultra low vapor pressure, Low VOC'S
- No heat required | No moving tool washers
- Residue from tools will not affect laminates
- Organic Renewable ingredients

## APPLICATIONS

- Continuous duty cleaner for lamination
- Cleans rollers, brushes, squeegees, tools, parts, etc.
- Flushing Chopper Guns
- Cleaning out equipment
- Many more applications

## SAFETY

- 100% biodegradable worker safe
- Non-flammable
- Very low toxicity profile
- No OSHA PEL or TLV requirements

## ECONOMY

- Cost in use 70% lower than acetone
- Used over and over again
- Can eliminate hazardous waste
- Can outlast 10-15 drums of solvent
- Self recycling

## ACETONE VS. SURFASOLVE COMPARISON
